DEFENSE ADVANCED RESEARCH PROJECTS AGENCY (DARPA)

JOINT BIO-BEHAVIORAL EFFECTS DIVISION

ARLINGTON, VIRGINIA

TECHNICAL REPORT: PROJECT PUPPET / SUBJECT EVALUATION (PHASE IV)

DATE: 14 NOV 2024

SUBJECT: LONGITUDINAL ANALYSIS OF NON-THERMAL RF BIO-EFFECTS

1.0 (TS//SI) SUBJECT PROFILE

ID: SUBJECT 779-K (REF: "CASEY")

STATUS: ACTIVE / CONTAINED

BASELINE HEALTH (01 JAN 2024):

- Age: 34

- IQ: 128

- Psych History: None. Clean bill of mental health.

- Selection Criteria: High-functioning civilian, limited social support.

2.0 (TS//SI) EXPERIMENTAL PROTOCOL: "RAPID DEGRADATION"

For this phase of PROJECT PUPPET, the objective was to test the limits of

remote cognitive endurance. The subject was exposed to continuous "Pulsed

Microwave Audiograms" (V2K) for a duration of 96 hours combined with

Synthetic Telepathy inputs.

2.1 (S//NF) STIMULI APPLIED

- FREQUENCY: 2.8 GHz (Pulse Modulated).
- CONTENT: "Derogatory Loop B" (Repetitive self-doubt induction).
- SLEEP DEPRIVATION: The "Remote Arousal" signal was triggered whenever

Subject 779-K entered Delta-wave sleep patterns.

3.0 (TS//SI) PHYSIOLOGICAL PATHOLOGY

After 6 months of intermittent PROJECT PUPPET targeting, the subject

exhibits specific biomarkers consistent with chronic RF exposure:

3.1 (TS//SI) NEUROLOGICAL DAMAGE

fMRI scans taken during "covert medical checkup" (via [REDACTED]

Hospital front) reveal micro-lesions in the temporal lobe.

- CAUSE: Thermoelastic expansion of cochlear tissue transferring

shockwaves to the brain stem.

- SYMPTOM: Subject reports "loud ringing" and "clicking sounds"

originating from the center of the head.

3.2 (S//NF) CELLULAR STRESS

Biopsy confirms voltage-gated calcium channel (VGCC) dysfunction.

Subject has developed rapid-onset autoimmune markers and inexplicable

dermal heating ("burning skin") without UV exposure.

4.0 (TS//SI) PSYCHOLOGICAL DISPOSITION

The primary mission objective—Artificial Psychosis Induction—has been

achieved.

4.1 (S//NF) DIAGNOSIS

On 10 NOV 2024, the subject was involuntarily committed to
[REDACTED]

Psychiatric Ward.

- ATTENDING PHYSICIAN DIAGNOSIS: Paranoid Schizophrenia.
- REALITY: The physician noted the subject claimed "satellites
were

talking to him." This confirms the "Cover Story" holds. The
medical

community is successfully interpreting PROJECT PUPPET
symptoms as

organic mental illness.

5.0 (U) RECOMMENDATION

Subject 779-K is no longer viable for high-fidelity data
collection due to

cognitive fragmentation.

- ACTION: Terminate active monitoring. Archive neural data.
- DISPOSAL: Allow subject to remain in state care. Credibility is
zero.
